EXAMINER

RAMPURIA, SATISH

ART UNIT PAPER NUMBER

2191

DATE MAILED: 02/14/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/081,329	Applicant(s) BARNETT ET AL.	
	Examiner Satish S. Rampuria	Art Unit 2191	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 December 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-32 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-32 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is in response to the RCE received on Dec 09, 2005.
2. Claims amended by the applicant: 1, 7, 12, 18, 23 and 29.
3. Claims pending in the application: 1-32.
4. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on Dec 09, 2005 has been entered.

Response to Arguments

5. Applicant's arguments with respect to claims have been considered but they are not persuasive.

In the remarks, the applicant has argued that:

- (i) Applicants respectfully submit that Leiba fails to anticipate amended claim 1, because Leiba fails to teach or suggest *“wherein at least one procedure comprises at least one portion of the software implementation and at least one portion of the software specification.”*

Examiner's response:

- (i) In response to the Applicant's argument, Leiba does disclose the limitations as recited in claim independent claim 1. Leiba discloses a method for verifying standards conformance for a server application where the configuration information and a sequence of test commands are provided with response requirements (specification) for expected response associated with each commands and testing the server application with expected response for performing compliance testing based on the response requirements. *See* FIG.4-9 and related discussion. Further, conformance testing is done to so that the product is conformed to the standard or specification as required. *See* the NPL previously cited "Overview of Conformance Testing." For independent claims 7, 12, 18, 23 and 29, Applicants submitted the similar reasons to those stated above in claim 1. In the response, the similar response is given as stated above for claim 1. Applicants make general allegations. Therefore, the rejection is proper and maintained herein.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2191

7. Claims 1-3, 5, 7-14, 16, 18-25, 27, and 29-32 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent No. 6,260,065 to Leiba et al. (hereinafter called Leiba).

Per claim 1:

Leiba disclose:

- A computer implemented method of conformance-testing a software implementation with a software specification (col. 3, lines 62-63 “a method ... software application”), the method comprising:
- applying the software implementation and the software specification to produce a conformance-test enabled implementation (col. 2, lines 11-12 “performing compliance testing based on... requirements”) comprising portions of the software implementation and the software specification integrated into a same body of code (col. 2 lines 65-67 to col. 3, lines 1-24 “the execution engine... include a response analyzer for non-deterministic ordering of responses and ordering of components within the responses... analyzer... provides... for testing in... client sessions... include a test generator... according to an input specification... test generator... provide a stress test with stopping criteria for testing durability of the server application... test generator... include a test sequence derived from a state machine... test sequence... derived from the state machine based on probabilistic transitions... response analyzer...” wherein nondeterministic choices of the software specification result in assigning a corresponding choice of the conformance-test enabled implementation to a variable (col. 2, lines 28-31 “each response ...non-deterministic... responses... each response”), wherein at least one procedure comprises at least one portion of the software implementation and at least one

portion of the software specification (col. 2 lines 65-67 to col. 3, lines 1-24 “the execution engine... include a response analyzer for non-deterministic ordering of responses and ordering of components within the responses... analyzer... provides... for testing in... client sessions... include a test generator... according to an input specification... test generator... provide a stress test with stopping criteria for testing durability of the server application... test generator... include a test sequence derived from a state machine... test sequence... derived from the state machine based on probabilistic transitions... response analyzer...”); and

- the conformance-test enabled implementation comprising a test that the variable comprises one of the nondeterministic choices of the software specification (col. 4, lines 7-10 “The analyzer component can be instructed to allow for permissible non-deterministic ordering of responses and ordering of components within any given response”).

Per claim 2:

- the conformance-test enabled implementation comprising a test that the variable conforms to a condition on the nondeterministic choice specified in the software specification. The limitations are similar to those cited in claim 1 and rejected under the same rationale set forth in connection with the rejection of claim 1.

Per claim 3:

The rejection of claim 1 is incorporated, and further, Leiba disclose:

Art Unit: 2191

- the conformance-test enabled implementation comprising at least one first operation to carry out when the variable comprises one of the nondeterministic choices of the software specification (col. 2 and 3, lines 65-67 and 1 “the execution engine... include a response analyzer for non-deterministic ordering of responses and ordering of components within the responses”); and
- the conformance-test enabled implementation comprising at least one second operation to carry out when the variable does not comprise one of the nondeterministic choices of the software specification (col. 2, lines 34-37 “specifying responses associated with the at least one command to be saved and used for subsequent commands and comparisons to the expected responses”).

Per claim 5:

The rejection of claim 1 is incorporated, and further, Leiba disclose:

- including in the conformance-test enabled implementation instructions of the software implementation to synchronize the state of variables of the software implementation with the state of variables of the software specification (col. 7, lines 8-10 “the analyzer 215 fetches an expected response, given in the TIF, and a server response, from a proxy 216 or a previously stored response from a variable, and compares the two tokens for equality”).

Per claim 7:

Leiba disclose:

Art Unit: 2191

- A computer implemented method of conformance-testing a software implementation with a software specification (col. 3, lines 62-63 “a method ... software application”), the method comprising:
- producing a software object organized such that a step of the software specification is surrounded by a corresponding code section of the software implementation in the software object (col. 2, lines 5-8 “providing configuration information and a sequence of test commands to the server application with response requirements for expected responses associated with each of the commands”); and
- the software object comprising at least one instruction which, when executed by a computer system, causes an identification of a mandatory call comprised by the software specification to be stored in a memory of the computer system (col. 2, lines 45-49 “expected responses... marked as one of a mandatory response, an optional response, a forbidden response, several mandatory responses and several optional responses for permitting testing of various types of responses, various types of test data and varied implementations of the server application”).

Per claim 8:

The rejection of claim 7 is incorporated, and further, Leiba disclose:

- the software object comprising at least one instruction which (col. 2, lines 56-58 “test processor... includes parser... for parsing and checking test instructions input to the test processor”), when executed by the computer system (col. 2, lines 59-60 “test instructions into objects and an execution engine for executing objects”), causes a test that the state of

Art Unit: 2191

a conformance-test enabled implementation conforms to the software specification during the mandatory call (col. 2, lines “response of the server application upon execution of the instructions are compared to expected responses included in the test instructions to determine conformance” and col. 2, lines 45-49 “expected responses... marked... a mandatory response, an optional response... of the server application”).

Per claim 9:

- modifying the software comprising the mandatory call method with instructions which, when executed by the computer system, cause instructions of the software object to be executed to test that the state of the conformance-test enabled implementation conforms to the software specification during execution of the mandatory call method. The limitations are similar to those cited in claim 8 and rejected under the same rational set forth in connection with the rejection of claim 8.

Per claim 10:

- including in the conformance-test enabled implementation instructions of the software implementation to synchronize the state of variables of the software implementation with the state of variables of the software specification. The limitations are similar to those cited in claim 8 and rejected under the same rational set forth in connection with the rejection of claim 8.

Per claim 11:

Art Unit: 2191

The rejection of claim 7 is incorporated, and further, Leiba disclose:

- including in the conformance-test enabled implementation instructions of the software implementation to synchronize the state of variables of the software implementation with the state of variables of the software specification (col. 7, lines 8-10 “the analyzer 215 fetches an expected response, given in the TIF, and a server response, from a proxy 216 or a previously stored response from a variable, and compares the two tokens for equality”).

Claims 12-14 and 16 are the computer program product claims corresponding to method claims 1-3 and 5 and rejected under the same rationale set forth in connection with the rejection of claims 1-3 and 5 above.

Claims 18-22 are the computer program product claims corresponding to method claims 7-11 and rejected under the same rationale set forth in connection with the rejection of claims 7-11 above.

Claims 23-25 and 27 are the apparatus claims corresponding to method claims 1-3 and 5 and rejected under the same rationale set forth in connection with the rejection of claims 1-3 and 5 above.

Claims 29-32 are the apparatus claims corresponding to method claims 7-11 and rejected under the same rationale set forth in connection with the rejection of claims 7-11 above.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claim 4, 6, 15, 17, 26 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leiba in view of US Patent No. 6,321,376 to Willis et al. (hereinafter called Willis).

Per claim 4:

The rejection of claim 1 is incorporated, and further, Leiba does not explicitly disclose compiling the software implementation from a first high-level language into an intermediate language; compiling the software specification from a second high-level language into the intermediate language; and producing the conformance-test enabled implementation in the intermediate language.

However, Willis discloses in an analogous computer system compiling the software implementation from a first high-level language into an intermediate language; compiling the software specification from a second high-level language into the intermediate language; and producing the conformance-test enabled implementation in the intermediate language (col. 7 and 8, lines 60-67 and 1-3 "FIG. 4... the formal language specification is parsed into a specification intermediate (Block 31), then a test case compiler creates a compiled test case generator, potentially using an intermediate programming language manifestation of the generator and associated programming language compiler (both within Block 50) to yield an

Art Unit: 2191

executable generator... resulting compiled generator (Block 51) produces test cases in a manner functionally equivalent to the interpretative generator (Block 32)").

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the method of compiling software implementation / specification from high level language into an intermediate language as taught by Willis in corresponding to the method of verifying software applications using conformance test as taught by Lieba. The modification would be obvious because of one of ordinary skill in the art would be motivated to compile software implementation / specification from high level language into an intermediate language to provide an efficient way of performing conformance testing as suggested by Willis (col. 2, lines 38-53).

Per claim 6:

The rejection of claim 1 is incorporated, and further, Leiba does not explicitly disclose including in the conformance-test enabled implementation instructions of the software implementation to provide the choice of the conformance-test enabled implementation corresponding to the nondeterministic choice of the specification.

However, Willis discloses in an analogous computer system including in the conformance-test enabled implementation instructions of the software implementation to provide the choice of the conformance-test enabled implementation corresponding to the nondeterministic choice of the specification (376 col. 5 and 6, lines 65-67 and 1-4 "Choices... arise during generation... a production... occur a variable number of times or when one of

Art Unit: 2191

several exclusive productions (non-terminal or lexical tokens) may be exercised... formal specification must provide some means by which the formal specification author may denote allowable choices in context and/or strategy or the generator may implicitly supply a choice and strategy”).

The feature of providing the choice of the conformance test implementation corresponding to the nondeterministic choices of the specification would be obvious for the reasons set forth in the rejection of claim 4.

Claim 15 and 26 are the computer program product claims corresponding to method claim 4 and rejected under the same rationale set forth in connection with the rejection of claim 4 above.

Claim 17 and 28 are the computer program product claims corresponding to method claim 6 and rejected under the same rationale set forth in connection with the rejection of claim 6 above.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Satish S. Rampuria** whose telephone number is **(571) 272-3732**. The examiner can normally be reached on **8:30 am to 5:00 pm** Monday to Friday except every other Friday and federal holidays. Any inquiry of a general nature or relating to the status of this application should be directed to the **TC 2100 Group receptionist: 571-272-2100**

Art Unit: 2191

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Wei Y. Zhen** can be reached on **(571) 272-3708**. The fax phone number for the organization where this application or proceeding is assigned is **571-273-8300**.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
